PA System Telephone Interface RH2818I

RH-AUDIO Telephone Interface RH2818I can automatically answer an incoming phone call and broadcast the caller's voice over the PA system and even to individual zones, and a microphone input is provided for talking back to the caller.

By adding a telephone interface to a PA system and being given a fixed telephone number, we have introduced the ability to make announcements and paging calls from telephones. Telephones are not special or dedicated functionally in the way that microphones are. They are regular telephones, that might be local to the building, the site, or in fact they can be anywhere, national or even international.

The characteristics of [interface telephone](#):

- ※ The interface can automatically answer an incoming phone call and broadcast the caller's voice over the PA system.
- ※ Automatic or manual mode optional.
- ※ Built-in monitor speaker and volume control.
- ※ Activation output can be used to trigger other equipment remotely.

The specifications of [telephone system interface](#):

Model	RH2818I
Audio Output / Line input	0 dBV
Mic & Speaker	Build in
Activating out	Short circuit signal
Power Requirement	AC 220-240 V / 50~60 Hz
Power	AC 220V 10% 50 -60Hz
